

# Distribution of general quadratic expressions in skew normal settings

**Tingting Tong**, Tonghui Wang, Ziwei Ma

## **Abstract**

In this talk, the distribution of general quadratic expressions of multivariate skew-normal distribution (MSN) is introduced. The necessary and sufficient conditions under which a general quadratic form is noncentral shew chi-square distributed are obtained. A new version of Cochran's theorem is given. Some special cases and examples are given for illustrations of the main results.
